

SUMMARY

Seasoned Software Engineer with proven expertise in migrating systems to highly scalable distributed architectures with zero downtime. I specialize in cloud solutions and performance optimization, having successfully led critical projects at E2Open and AWS that significantly improved system efficiencies and security. Leveraging my strong technical background in Java, Python, and DevOps, I'm eager to contribute my skills to innovative environments. Open to relocation and committed to driving technological advancement and business growth through elegant, scalable solutions.

TECHNICAL SKILLS

Programming Languages: Java, Python, C, Go, Bash Scripting, JSON

Databases: MongoDB, Oracle, PostgreSQL (SQL)

Web Technologies: HTML, CSS, JavaScript; Frameworks: React.js, Angular.js, Node.js

APIs & Protocols: RESTful APIs, gRPC, MCP (Model Context Protocol)

Frameworks & Middleware: Spring Boot, Spring, Apache Camel, ActiveMQ

AI & Search: AI/LLM Integration

DevOps & Cloud: AWS, Docker, Kubernetes, Jenkins, Git, Linux, JIRA, Temporal, Helm, Flux (GitOps)

Performance Testing: JMeter, Wireshark, EasyMock

Monitoring & Observability: Grafana, Prometheus, Elasticsearch, Zabbix, Eclipse Memory Analyzer, Snowflake, Superset

Build Tools: Maven, Gradle, Bitbucket (CI/CD)

PROFESSIONAL EXPERIENCE

Senior Software Engineer, E2OPEN | Austin, USA

Sept 2025 – Present

Technologies: Python, Java, Spring Boot, REST APIs, Kubernetes, Docker, Jenkins, GRPC, Elasticsearch, AI, MCP (Model Context Protocol)

- Built an AI-powered MCP (Model Context Protocol) server in Python that bridges natural language AI assistants (GitHub Copilot, Claude) to a supply chain platform - developing a private skills engine, per-user AI memory system, intelligent caching layer, and a CLI with 50+ MCP tools, enabling operators to debug, replay, and manage workflows conversationally
- Architected and delivered a high-throughput production system adopted by 30+ enterprise customers, handling 1.5M+ daily requests via RESTful APIs and doubling overall platform traffic; implemented intelligent autoscaling based on real-time traffic volume and request payload size, reducing over-provisioning costs by 40%; leveraged Gateway API and Contour for cross-datacenter traffic routing, achieving 99.9% uptime with seamless failover and sub-50ms latency across distributed environments
- Designed and built a real-time transaction event pipeline ingesting 100% of transaction events into Apache Superset and Snowflake, driving a 70% reduction in mean-time-to-resolution (MTTR) by enabling deep analytical visibility into success/failure rates and accelerating root-cause analysis of processing errors across distributed workflows

Software Engineer, E2OPEN | Austin, USA

July 2023 – Aug 2025

Technologies: Java, Spring Boot, Kubernetes, Docker, Jenkins, ActiveMQ, Elasticsearch, Prometheus

- Migrated monolithic system to microservices architecture using Docker, Kubernetes, and Helm Charts, achieving zero downtime while improving scalability by 65%
- Implemented GitOps with Flux for continuous deployment/delivery alongside Jenkins, enhancing efficiency by 55% and eliminating deployment errors
- Integrated ActiveMQ with Apache Camel, streamlining synchronized queuing and improving system consistency by 70%
- Optimized transaction flows by 40% through Wireshark network analysis and systematic performance testing
- Developed Bash scripts to automate JMeter testing and SQL data extraction, enhancing testing effectiveness by 66%
- Led Spring/gRPC project that enhanced system resilience by 80% through optimized algorithms and data structures
- Established comprehensive observability pipeline using Prometheus, Elasticsearch, Grafana and Zabbix, improving system visibility and troubleshooting efficiency by 75%

Software Development Engineer, Amazon Web Services (AWS) | Boston, USA

Aug 2021 – June 2023

Technologies: Java, AWS (EC2, EBS, CloudWatch, S3), RESTful APIs, Spring Boot, OpenZFS

- Delivered OpenZFS SAZ File Server in AWS cloud, improving FSx data access speeds by 45%
- Architected scalable RESTful API for OpenZFS using Java/Spring Boot, increasing throughput by 55%
- Scoped Service Linked Role (SLR) policies to fortify security across AWS regions, decreasing security vulnerabilities by 75%
- Developed customer UI and internal tracking dashboard for OpenZFS, boosting operational efficiency by 90%
- Mentored interns in delivering AWS CloudWatch metrics and scaling storage solutions, improving team productivity by 40%
- Resolved critical filesystem issues and kernel deadlocks, decreasing system downtime by 60% and improving customer satisfaction
- Assured quality by integrating EasyMock and JMockit into for streamlined builds and testing, reducing bug escape rate by 65%

Philanthropic Software Engineer, AJ Investment | Mumbai, India

Jan 2018 – June 2019

Technologies: Python, Spring, Oracle DB, Kubernetes

- Built Python investment system with Oracle database, boosting profitability by 75%
- Containerized applications with Kubernetes, improving scalability by 80% and reducing costs by 35%
- Integrated Spring Boot and JPA for PostgreSQL market analysis, improving query speed by 60%

EDUCATION

Master of Science - Computer Science | Binghamton University, State University of New York

Aug 2019 – May 2021

Bachelor of Engineering - Computer Science | University of Mumbai

Sep 2014 – Jun 2018
